

When politicians claim that there are no studies from other countries and their governments regarding Breed Bans, consequences and effect, it is simply not true . There are countless of studies that all point in the same direction

- Breed bans does not work
- it has a negative effect on society and dog owners
- and NO effect on the number of dog bites , not even the serious bites.

Studies

England

Study from Lincoln University in England - Irresponsible and bad dog owners to blame for aggressive dogs, not the breed
